

Governance Overview

System-wide monitoring showing exception activity across roles and facilities

January 1, 2025 – December 31, 2025

100K

Total Events

18.8%

Exception Rate

19K

Exception Count

Exception Rate by Role

Exception Rate by Facility

Key Insights

- Exception activity is concentrated within a small number of roles
- Facility shows secondary influence compared to role structure

Governance Investigation

Investigate user-level exception concentration and role-specific patterns to support review

January 1, 2025 – December 31, 2025

Exception Patterns by Role and Experience

Experience Band ● High ● Mid ● Low

Top Users by Exception Count

Experience Band

- High
- Mid
- Low

Key Findings:

Exception patterns vary across healthcare roles, with risk concentrated in different experience bands. This suggests governance risk is driven more by workflow responsibilities than tenure alone.

Governance Risk Profile

Distribution of exception activity by department, resource type, and user actions

January 1, 2025 – December 31, 2025

Facility

- East Clinic
- North Hospital
- South Hospital

Key Findings:

Exceptions are concentrated in Case Management and Compliance, with View and Modify actions accounting for most activity. The selected facility shows that exceptions are primarily driven by routine access to Patient Records and Claims rather than rare system interactions.
